

Although, your health condition may impact your everyday life, do not let it define who you are. DEPAKOTE (valproate) is used alone or with other medications to treat certain types of seizures. DEPAKOTE (valproate) is also used to treat mania (episodes of frenzied, abnormally excited mood) in people with bipolar disorder (manic-depressive disorder; a disease that causes episodes of depression, episodes of mania, and other abnormal moods). It is also used to prevent migraine headaches, but not to relieve headaches that have already begun. Valproate is in a class of medications called anticonvulsants. It works by increasing the amount of a certain natural substance in the brain. This medicine is available only with your doctors prescription. Thanks and may you have a good understanding about this drug DEPAKOTE (valproate). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
